

asgn07 - Intro to OOP DB

Objectives

- Connect to a database using MySQLi
- Create a database on your webhost
- Run your database and PHP code from your webhost

asgn07

Code locally

- Create a new folder named **asgn07-oop-db-intro*.
- Watch the first three chapters from [PHP: Object-Oriented Programming with Databases](#)
- Code along with the author.

Git

- Same process as previous git requirements.
- Stage and commit your code. Delete your `dev` branch if you are finished with it from the previous assignment.
- Create a new `dev` branch and `checkout` to it.
- Merge to `main` once you are finished.
- Push to GitHub.

Use your webhost

- Create a database on your webhost. We will review this in class.
- Modify your **db_credentials.php** file so it correctly references your webhost database credentials.
- Upload your code to your webhost.
- Test your code.

Update your index.html file

NOTE: Add your GitHub address to the top of your WEB250 site. Add the necessary links to your **index.html** file so your instructor can easily open your file.

Submit

- Submit a text file with your webhost URL for this assignment in Moodle.
- Name the file **yourLastName-asgn07.txt**.
